Bespoke Manufacturing

E-Tech Yachting builds new and retro-fits existing switchboards with the latest power management systems, resulting in a seamless integration of existing and newly designed equipment. Years of experience with numerous refits has inspired and informed our current philosophy and approach in the manufacturing of our bespoke switchboards and control panels.

Through close collaboration with EATON, a world leader in power technology solutions, we have developed a range of panels and switchboards that are built to the rigorous standards of all relevant class societies.

ETY's *BLUEWAVE*[™] series switchboards and alarm monitoring systems are designed to be robust, modular, incredibly lightweight and compact offering a flexibility and efficiency, in both their design and performance, unparalleled in the marine industry. The modular design's greater flexibility and efficiency allows each cabinet to be stationed anywhere there is available space, or at the points at which the specific systems and equipment they monitor are located.

Every ETY marine panel is fully inspected and tested to IEC 60439-1.

- Switchboards
- Power management systems
- Panels and systems

- Process controls systems
- Lighting control panels
- Motor starter boards
