

Diamond Intercom Wired & Wireless Intercom System

The Diamond Intercom System enables clear communication for 6-64 users in the harshest conditions. The intercom system can be paired with a specially designed headset to ensure that crews are able to stay safe and communicate effectively at all times. The ultimate configuration for the system is with fixed crew positions and a wired intercom and radio combiner with complementary duplex wireless body packs and headsets giving an extended wireless range of up to 50m.

Would you like to mitigate wind and ambient noise?

The Diamond Intercom system has been developed for those that need a robust, functional and cost-effective solution that provides crystal clear communications in the most austere environments.

The Big Blue Yacht Communications Headset was designed specifically for the harshest of conditions on the water, filtering out wind noise without compromising intelligibility.

The headset comes with a latch push-to-talk button that allows users to choose their communication preference and perform tasks hands-free.

Do you require robust, waterproof equipment?

The Diamond body pack has a modular design and small footprint to allow for user comfort and simple operation.

The Diamond Intercom System has been battle-tested by Search and Rescue teams, patrol boats, UK MoD and professional racing yachts. It is the intercom of choice for America's Cup and F50 class regattas, a testament to its durability.

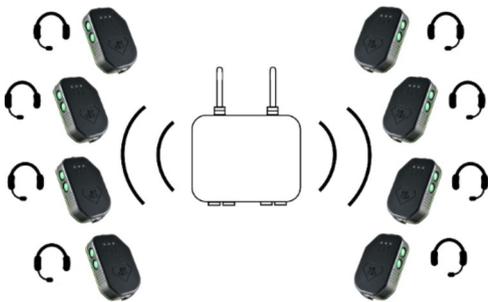

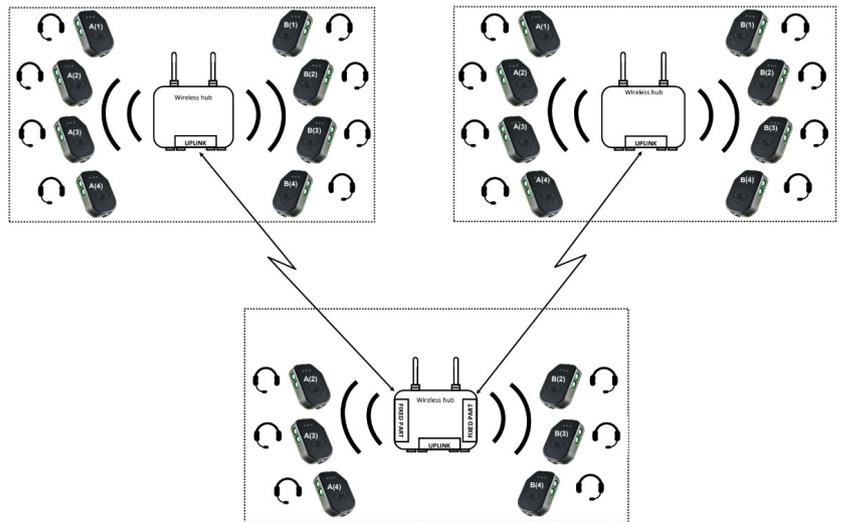

The Diamond system balances intuitive functionality and ease of use with a robust, low-maintenance design.

Key Features of the Diamond Intercom System

- Over 50m line-of-sight from Hub to Body Pack
- Over 100m line-of-sight from Hub to Hub
- Full duplex voice communication
- Simple, lightweight user interface
- Easy system configuration
- Compact footprint

- Wired intercom has user-specific VOX sensitivity control. User can personalise voice-activated comms at any time
- Wired intercom can accommodate any radio/user combination with up to 6 radios and 8 users
- Clear, reliable communications
- Ruggedised for maritime use (minimum IP67)
