

# Exterior Weathertight Fire Door

- A0, A30 and A60 Lloyds Type approved
- Glazed and Technical door options
- Designed to match non Fire rated doors
- Machined from Aluminium plate
- Engineered to meet required design pressures (as standard up to 35kn m2)
- Customised solutions available on request
- Stainless Steel or Aluminium frames

*Exterior door immediately after 60 minute test up to 925 degrees Celcius*

*glowing hot interior at 60 minutes*

Aesthetically pleasing in design, our fire doors are visually identical to our comprehensive range of hinged doors and integrate seamlessly into the superstructure. Security and safe egress are critical and only Certified Fire Doors tested in the harshest of conditions provide unconditional peace of mind. Tested for 60 minutes at temperatures up to 925 degrees Celcius (1697 degrees Fahrenheit), these exterior weathertight fire doors effortlessly exceeded the requirements for Lloyds Register Type Approval. During the extensive 60 minute trials in these severe conditions, the door and exterior glass easily held its integrity. And even though the interior glass layer melted in the extreme testing conditions, (as pictured above) the exterior sensors did not rise more than 60 degrees celcius over the hour, proving how robust these doors performed in the severe testing conditions.
