

Automated Locks

The perfect solution for hinged exterior doors, our automated lock systems are able to be integrated with your on-board security system.

Providing total peace of mind, our automated lock system also enables doors to be monitored and activated remotely or locally.

The system is typically supplied with a simple clean interface for reliable operation

- Two proximity sensors are supplied in door frame as standard (more can be supplied on request)
- Actuator supplied inside door (12 volt as standard, adaptor can be supplied to convert 24volt – 12 volt)
- Controller to interface between security system and lock system
- Functionality logic supplied by yard or security company
- A 12v electrical signal will lock or unlock the door
- Lock system can be manually overridden to lock/unlock for safety reasons
- Manual function is identical to any standard manually operated hinged door
- Can be integrated with Key fob, Key pad, Piezo buttons, biometric scanners etc
- Entry Doors can be manually operated
- Key lockable from exterior
- Door handle lifts up for dogging
- Thumb turn is used to manually lock from interior

*Biometric Scanners (pictured)
are one of many options available*
