

# New XP2 Series

## InstaTrim Trimtabs

Only 1 cylinder per tab in 40-50 feet boats

The new XP2 series use reliable technology to meet the demands of modern boating in aspect of quality, comfort, fuel consumption and being quick to install with use of plug-in connections. The XP2 series are being delivered with Tablocator integrated into the cylinder or without, and has an approximately 40% greater thrust compared to the standard cylinder systems. It has an unique six-edged design allowing it to withhold larger loads.

All together this means that a XP2 system can be run on for an example 40-50 feet motor yacht with still one cylinder per tab. This mean variety of choice to reasonable pricing and quick & simpler installation. The XP2 cylinder need only one single 28mm hole through the transom to allow both the oil and the tablocator wire inside the boat. All piping and connections are inside the boat.
