ManOverBoard 2010

BuoySmoke 2010 *without LED lighting system*

The **PyroPol ManOverBoard 2010** is a combined Light and Smoke Signal for position marking and to indicate wind direction for use by day and night – even on petrol or oil covered water.

The Signal provides 15 minutes of dense orange smoke combined with a unique central LED lighting system. The self-activated light has a minimum output of 2 candela for at least 15 hours to become **the first worldwide combined light & smoke signal** fulfilling the requirements of both – SOLAS/MED and USCG.

It is automatically deployed - by releasing an attached lifebuoy - or can be manually activated. The remarkable drop height up to 150 m qualifies the **ManOverBoard 2010** far beyond the traditional shipping for use on oil and gas rigs, offshore wind turbines and aircrafts.

World novelty!

Innovation & Perfection in every detail

- ✓ **Personalize your ManOverBoard 2010**
Different colors possible

- ✓ **SOLAS/MED and USCG approved**
15 h light & 15 minutes smoke
