

# TILLMAN DOMOTICS

Redefining Home Automation

HOME AUTOMATION SPECIALIST **TILLMAN DOMOTICS** TEAMS UP WITH HI-FI SUPREMO **FERGUSON HILL** AND LIGHTING DESIGNER **BEN ROUSSEAU** TO OFFER STATE-OF-THE-ART, CUSTOM SPEAKERS ON ITS HOME CINEMA SET-UPS

As part of its audio-visual services, Tillman Domotics is installing Ferguson Hill's shapely FH001 speakers with illuminated detailing by lighting designer Ben Rousseau and working closely with these brands to offer further customization on its home cinema set-ups. In a design that owes much to the Bauhaus dictum of form follows function, the FH001 speaker has custom drive unit that is added to a stunningly contemporary 1.65m acrylic horn. As it's transparent and minimalist, the speaker doesn't impose itself on the decor of an interior and yet the horn amplifies the sound making the speakers 10 times more efficient than normal speakers. Custom creations can be programmed to have reactive control systems where the light responds and dances to the music and can be controlled with their own apps on iPhone or iPad.
