ENGINE**GUARD** ✕ KEEP YOUR OUTBOARD SAFE FROM THEFT

THE FIRST STANDALONE ALARM AND TRACKING SYSTEM FOR OUTBOARDS.
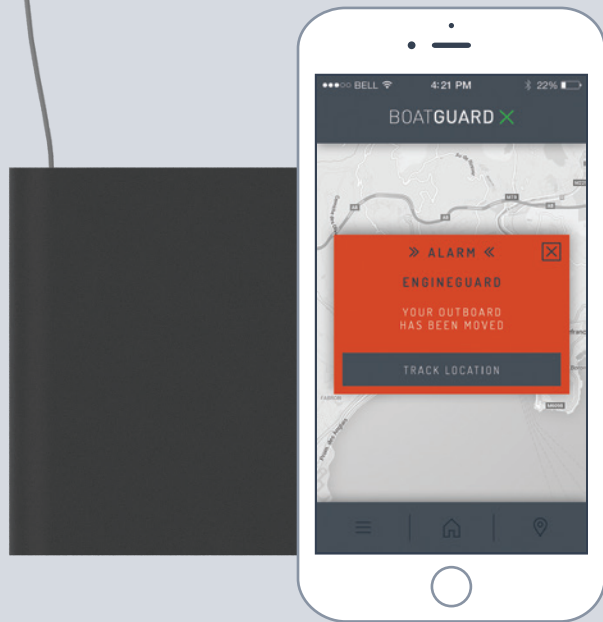

WHAT IS ENGINEGUARD

ENGINEGUARD is a small, simple, unobtrusive device designed to protect your outboard motor from theft. When detached from the boat, it will send an alarm to your phone and start showing its location on the map.

WHY CHOOSE ENGINEGUARD

ENGINEGUARD is the only alarm and tracking system for outboards with an independent power source. It requires no installation. You simply put it inside the outboard motor and connect the adjacent cord to the boat. Featuring special purpose batteries, Engineguard will still work after 8 years.
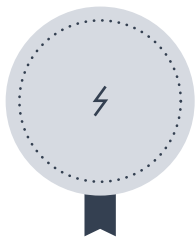

BENEFITS

> be alarmed when your outboard is detached from your boat,
> be able to locate the outboard when stolen,
> get help from other EG owners who see alarms in their area,
> rest assured that your outboard is still there.

ENGINEGUARD is controlled by your smartphone app. Available for iOS and Android.

FEATURES

Independent power source
8 years battery life

No installation required

Compact size

Theft alarm and tracking

Unobtrusive design
