

THE ACCESSORIES

In order to provide clients with a complete and highly reliable service, Mive Eco also offers a very wide range of accessories for all types of craft.

In our catalogue you can find silicone sleeves of any kind of dimension which can withstand high temperatures and critical work; thermal expansion entirely manufactured by stainless steel AISI 304 and 316 strong enough to ensure a very long durability even in aggressive chemical environments.

We provide also to the installation of Particulate Filters HUG, the Nauticlean™ type for marine applications, integrating them into our exhaust systems.

All our products, accessories, finished, even those that may seem minor, are tested. This to ensure maximum performance reliability and durability.

Textile insulation

THE COMPANY

MARINE EXHAUST SYSTEMS

Mive Eco, certified ISO 9001, is active since 1991 in designing and manufacturing pleasure, military and work vessel exhaust systems, as well as innovative complete exhaust systems thermal and acoustically optimized by customized textiles and rigid thermal insulation. Mive Eco studies and produces soundproofing for on board Gen Set and engine rooms.

THE MANIFOLDS

Any type of marine engine powers your boat, Mive Eco has for you the right solution: in fact the experience gained during the years allows us to realize the ideal exhaust manifold for your boat. Starting from the design until the test, our experience is made available to the client in order to obtain a space-saving product, refined from an aesthetic point of view and at the same time highly functional.

Every collector manufactured by Mive Eco also has the relative rigid insulation, which, with a few centimeters thick, is able to obtain substantial heat reduction.

The client also can choose the finish and the color of the insulation from a wide range in our catalog.

Our company, as always creator of important innovations, is currently testing alternative materials in order to further improve the thermal culling process.

THE SILENCERS

Today, one of the most important trouble in the sailing world is the one linked to the noise of own craft.

In that regard Mive eco designs and manufactures high-capacity silencers for noise abatement, therefore increasing considerably the comfort in any room of your vessel.

All the silencers of our production are entirely made of composite material with high strength and efficiency. By the tests made it is possible to detect the very high noise abatement that our products are able to guarantee to every kind of frequencies emitted. Our silencers are designed taking into consideration the needs of the client in order to preserve the most of available space on the boat.
