

LG Water Solutions

TFN RO Membrane Technology

Nano:H₂O™

LG Water Solutions

LG Water Solutions, a division of LG Chem, manufactures NanoH₂O[™] seawater and brackish water reverse osmosis (RO) membrane elements based on the breakthrough Thin-Film Nanocomposite (TFN) technology.

Technology

Thin Film Nanocomposite (TFN) technology improves membrane performance by embedding benign nanoparticles in the surface of the membrane. This innovation increases flux in seawater RO membranes up to 20% without compromising salt rejection.

Seawater Reverse Osmosis (RO) Membranes

Global Project Wins Driven by Performance

Overview

LG Water Solution's NanoH₂O™ seawater RO membranes deliver industry-leading salt rejection and 20% more flow than the membranes based on conventional technologies. Our seawater RO membranes significantly reduce the cost of desalination while delivering superior water quality. With state-of-the-art manufacturing and a customer-centric approach, LG Water Solutions has been awarded more than 4,000 Million Liter per Day (MLD) in seawater projects in the past three years.

LG SW SR G2, GR G2 and R G2

Next generation membranes with industry-leading salt rejection up to 99.89%

LG SW SR, GR and R

High-rejection membrane ideal for high feed TDS and high permeate quality requirements

LG SW ES

Energy saving membranes ideal for low feed TDS and low temperature seawater applications

Brackish Water Reverse Osmosis (RO) Membranes

Engineered for OPEX Savings

Overview

LG Water Solution's NanoH₂O™ brackish water RO membranes are gaining fast traction with major utilities and industrial end-users worldwide. The TFN technology coupled with intrinsic anti-fouling properties delivers reliable and durable performance, and energy savings, leading to a lower total cost of plant ownership.

LG BW AFR G2

Anti-Fouling, High Rejection, High Flow, High Durability

LG BW AFR

LG SW G2 Membranes

With industry's **highest** salt rejection, LG SW G2 membranes can provide:

- **Improved permeate quality** without increasing operating pressure
- **Reduced energy cost** without sacrificing the permeate quality
- **Reduced capital and operation costs** for multi-pass SWRO systems
