Press Release 10 November 2017

Flow Marine Ltd are returning to METSTRADE with their ground-breaking, Alarm Monitoring and Control System.

The system uses the most advanced software technologies to provide a user interface which can be accessed from any computer or mobile device on board the vessel or - via their secure web portal - anywhere else in the world.

The system is built from off-the-shelf, type-approved industrial components and is already installed on vessels ranging from a 25m racing sloop to an 82m Lloyds-classed motor vessel.

The system's support for all common marine and industrial fieldbus protocols as well as emerging internet IoT technologies means that as well as supporting standard switches and sensors, it can interface with virtually any other system, including NMEA-based instruments, engine controllers, power management systems, PLCs, and proprietary controllers.

This year they are launching version 1.5 of their system, which provides an advanced configuration interface giving full control over setup and calibration of all sensors and alarms. Separately they will be demonstrating their online quotation portal, which allows installers and potential customers to enter, edit and save their system requirements and get an instant quotation.

Visit them at their METSTRADE stand (SuperYacht Pavilion 11.121) or their website (http://flow-marine.com).
