made to last

FINALLY: A PRESS FASTENER YOU CAN TRULY RELY ON

Hardly anybody realizes that press fasteners used in the tough conditions like marine applications are not even resistant to sea water - until now! Probably the smallest item on deck is now available in real 316 stainless steel: CAF-316®. To achieve true durability, even the internal spring is made of top quality duplex stainless steel, insuring years of dependable performance regardless of the conditions.

CORROSION FREE

CAF-316 is a press fastener, made of the high-quality material 316 Stainless Steel

RELIABLE

Even the spring inside the socket is made of high quality duplex stainless steel, making sure the fasteners performance is stable over time and use, without deformation. No matter the conditions

EASY TO INSTALL

Installation is like a normal press fastener (self piercing shaft) using the same application tools, from hand punch to full automatic machines

CORROSION FREE

It is often said by experienced cover makers and fabricators: the weakest link of a cover, tent or any other textile product are the fasteners. More than the textile and the craftsmanship itself, the quality and lifetime of their products depend on the thread, zippers and fasteners. As true reliability drills down to every detail, CAF-316 uses spring technology that avoids galvanic corrosion or electrolysis, uses a thread for its screws that is designed for its purpose, is full sea water resistant, while ensures a similar and stable spring performance as one is used to and should expect. Accept no compromise.

At last SUREFAS brings modern technology to bear on a long-standing problem: making press fasteners truly corrosion free.
