COLTECH® GRIPELAST®

The advanced Non-Skid Deck Coating

Yachts and workboats are permanently exposed to a combination of moisture, saltwater and saltwater spray. The result is slippery and dangerous decks, stairs and external surfaces that can potentially result to serious injuries. The solution is offered by **COLTECH® GRIPELAST®** the advanced Non-Skid Deck Coating

COLTECH® GRIPELAST®

The advanced Non-Skid Deck Coating

COLTECH® GRIPELAST® is a superior, water-based, hard-elastic, modified Polyurethane texture coating, providing high traction and non-skid properties, extreme durability, UV and water resistance, high elasticity to prevent cracks and provide a comfortable feeling while walking and optically appealing results.

COLTECH® GRIPELAST® is an easily applied water based non-skid coating free off harmful volatile organic solvents.

According to your needs, the texture of the surface can be adjusted from a rolled "pleasure boat" texture to an industrial grip "work boat" texture. Your boat deck will look new again and will be protected from the combined weather influences and heavy use. Compared with conventional Marine non-skid deck coatings, **COLTECH® GRIPELAST®** will function and protect your surface for many years to come without the need of grinding and reapplication.

USES

- Yachts
- Sailboats
- Fishing Vessels
- Aluminum Boats
- Steel Boats
- Fiberglass Boats
- Docks
- Residential Decks & Walkways

ADVANTAGES

- Easy to apply
- Water based, no volatile solvents
- Non-skid finish with perfect texture
- Low-glare, IR reflective finish
- Hard elastic to provide smooth feeling while walking
- Durable
- Water and UV resistant
