

Press release of the 7<sup>th</sup> of November 2018

**BEHO CANDOCK FRANCE - METSTRAD 2018 -- AMSTERDAM 13<sup>TH</sup>, 14<sup>TH</sup> AND 15<sup>TH</sup> OF NOVEMBER 2018 – MARINAS AND SHIPYARDS PAVILION – HIGH TECH NAUTICAL ISLAND N° 05-106**

**THE UNIQUE AND EVOLVING FLOATING PRODUCTS THAT ARE DESIGNED BY CANDOCK.  
BEHO. INNOVATIONS THAT CREATE ANCHORING AREAS ON ARTIFICIAL REEFS AND THAT PRESERVES  
THE MARINE ENVIRONMENT.**

**BEHO CANDOCK FRANCE** brings to France, a modular floating products brand that are maintenance free, evolutive and thanks to its quality that is renowned and unrivalled it is also environmentally friendly. Global leader in the design, delivery and installation of modular floating systems, the company manufactures its products in Canada and has been showing a continuing growth for 20 years.

**BEHO CANDOCK FRANCE** has also developed the **LED DROPS** that are solar generated lit buoys that don't require wiring and that are totally autonomous. By nightfall they light-up, providing the buoyage for restricted areas, swimming areas, navigation channels, speed-limit zones and all other enforcement that requires an increased visibility.

They also have a fun and stylish design too.

Creating tailor-made products that are adaptable to all types of configuration in the sea, lakes and rivers and in the form of modular pontoons and all floating systems, **BEHO CANDOCK FRANCE** extends its know-how toward marine environment and innovative concepts: **THE ANCHORAGE AREA ZONES ON ARTIFICIAL REEFS.**

**BEHO CANDOCK FRANCE provides innovative, ecological and functional concepts for ports and marinas: the anchorage area zones on artificial reefs.**

The ever-increasing fleet and the development of underwater and recreational water sports has contributed to the port's congestion of their infrastructures. The expansion of zones outside the ports area creates problems that involve the degradation of the sea floor and dealing with waste management. Maintaining the touristic attraction of very busy sites and curbing the excess while encouraging environmental initiatives are the challenges that ports and marinas need to face today.

**BEHO CANDOCK FRANCE proposes green moorings and innovative anchorage areas. These new anchoring zones in the form of floating marinas can be anchored on artificial reefs. Combining high technicity, safety, comfort and protection of underwater sites, the innovative anchorage solutions enable the renewal of the biodiversity.**

**The space requirement for the same amount of boats is 15 times less than a traditional structure (ZMEL).**

**At the moment and during the development of the anchoring zones on artificial reefs, BEHO CANDOCK FRANCE is looking for a partnership and a favourable merger that would enable the commercial and expansion of its project.**

**Beatrice Hospital who is the project developer and the business executive at BEHO CANDOCK FRANCE will be a participant on the Nautical High-Tech&Green stand and will be able to answer any questions. Organise your visit from the press contact.**
