

The roaring silence of a 450 hp outboard motor

GreenStar Marine International AB launches the next generation of always connected inboard and outboard electric propulsion systems at METSTRADE Show in Amsterdam, Nov 13-15 2018. Next to a major upgrade of the inboard propulsion systems up to 35 hp, GreenStar Marine will present a brand new electric outboard motor with power options up to 450 hp.

OUTBOARD

Outboard motors above 100 hp is in high demand but with no electric options yet available in the market. GreenStar Marine is launching a brand new electric outboard motor, utilizing the latest available electric motor and battery technology available. The first product will be a 450 hp outboard with early deliveries starting in 2019.

ALWAYS CONNECTED

Connectivity is a fundamental part of all drive systems delivered by GreenStar Marine. It allows over-the-air upgrades, optimization and troubleshooting of installations and gathering critical data for further improvements. Boat owners will be able to monitor their systems at any time from any location, control and program charging times as well as accessing travel logs and usage through the convenience of the GreenStar Marine smartphone app.

INBOARD: E-LINE

E-Line inboard drive systems are the most cost-effective way to convert sailboats to silent, clean and trouble-free propulsion. Available for Straight Shaft conversions as well as SailDrive solutions in two different sizes for boats up to 40 feet.

INBOARD: P-LINE

P-Line inboard drive systems provide a premium experience with the highest quality components for maximum performance. With convenience, safety and performance in focus we've carefully selected the absolute best available components to work in perfect harmony. The end-result is the best performing electric propulsion system available with superior efficiency and range. Available in three sizes for boats up to 50 feet, for Straight Shaft drive as well as SailDrive solutions.

ECO CHARGE – CHARGE WHILE SAILING

Included in all P-Line systems and available as an option for E-Line, Eco Charge will use the propeller to drive the motor as a generator while sailing to charge the batteries.

POWERFUL BATTERIES FOR A PREMIUM EXPERIENCE.

To guarantee functionality and a true premium experience, the systems from GreenStar Marine are always shipped together with a modern lithium battery pack ranging from 24 V to 96 V for the inboards and 400 V for the outboards. The customer is only required to select a size that fits the intended use of the boat.
