

NEW PETITE-SIZED UNDERWATER LIGHT PACKS A PUNCH WITH UP TO 20,000+ LUMENS

Underwater Lights Limited™ to Introduce Compact-Yet-Powerful LED Light at FLIBS & METS 2019 Boat Show

FOR IMMEDIATE RELEASE:

August 2019, Sevenoaks, Kent, UK - Underwater Lights Limited has developed another market leading underwater LED marine light taking the standard for the industry to yet another level; their new QTS-100 is small in size yet powerful enough to project a brilliant 20,000 lumens of light output - enough for the largest of composite Superyachts yet compact enough for a mid size runabout.

Making its debut at the prestigious Fort Lauderdale International Boat Show this November, the QTS-100 is small in size with a low enough profile to allow it to be flush-mounted in nearly any location on the hull or transom.

The QTS-100 is available in 3 formats and is designed with a hole cut-out of 74mm making upgrading to LED technology easy and without costly hull repairs. It's proven AB2 housing construction has been a solid performer for 27 years throughout the Underwater Lights Limited product range.

The QTS-100 Internal is the DC model which has a lumen output of 10,000 and is recommended for composite boats up to 30m/100ft. You can space each fixture between 1-5 meters/3-9 ft apart for the best even illumination as it has a standard 140 degree beam angle providing a wide-spreading light pattern preventing dark spots between fixtures. It is controlled by a standard on/off switch with a 11-28V DC power range and is available in a single color white and blue or the new dual color white/blue option

The QTS-100 External is The AC version (110-240vac) and has an external driver which provides the brightest light output of 20,000 lumens. Suitable for vessels over 20 meters/65 feet with the same 140 degree beam angle. It is controlled by a standard on/off switch and is available in white and blue

The QTS-100 RGBW is the full color change model available in both DC or AC. Powered via an external driver which is controlled via a DMX controller (sold separately).

QTS-100 joins an impressive line-up of underwater marine lighting products from Underwater Lights Limited including retro-fit models meaning any vessel already equipped with underwater lighting can be easily upgraded to the latest LED technology without hauling.

The complete QTS-100 range has been Lloyds certified for test and design pressures to 100 and 25 bar.

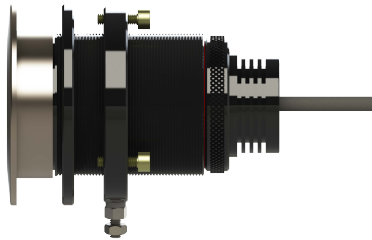

###

Come see the new QTS-100 and meet the Underwater Lights Limited team in the Superyacht pavillions at the [Fort Lauderdale International Boatshow](#) booth #692 and booth #10.104 at the [Metstrade Show](#) in Amsterdam.

About Underwater Lights Limited™

Since 1991, Underwater Lights Limited have been manufacturing underwater lighting products on their own machines and assembled in their own factory for A1 quality control and are fully approved by the Lloyds Register of Shipping.
