

ProMinent at AQUATECH 2019

Web-based Solutions for Metering- and Process Technology

At this year's AQUATECH ProMinent convinces with web-based solutions for metering and process technology in hall 11, booth 11.110. They avoid operating errors and minimise the consumption of the raw materials used. At the same time, reliable processes are ensured and availability increased.

Digital Fluid Management with DULCOnneX

The gamma/ X and gamma/ XL solenoid diaphragm metering pumps in combination with their DULCOnneX gateway enable simple monitoring, analysis and optimisation of processes. Digitally networked, all the necessary information is available for optimum system control and ensures trouble-free processes at all times.

Additional application possibilities result from the optimal interaction with a newly developed suction lance. Perfectly matched to the control circuit of the pump, the filling level can be measured very accurately.

Service-friendly

Another highlight is the new DULCOflex Control DFXa peristaltic metering pump. Its intuitive user interface with click wheel makes it easy to operate.

The dosing head developed and patented by ProMinent enables a quick and uncomplicated hose change with a unique change concept, without any tools. The display gives the operator precise instructions on the steps to be taken when changing the hose.

The peristaltic pump is especially suitable for dosing highly outgassing, highly viscous, abrasive, shear-sensitive and chemically aggressive fluids.

gamma/ XL solenoid diaphragm metering pumps and DULCO[®]neX gateway offer an intelligent solution for the digital networking of system components. The innovative process management solution from ProMinent enables simple monitoring, analysis and optimisation of processes.

Peristaltic metering pump DULCO flex Control doses between 10 ml/h up to 30 l/h at up to 7 bar counterpressure.
