## Company Profile

ATS S.L was founded in Viareggio in 2008 after more than 30 years of experience in the naval installations sector. It is specialized in the construction of **hydraulic**, **pneumatic**, **oil and fire fighting systems**. ATS has a production team of 80 people which allows to deal with both urgent and unscheduled requests, without neglecting any work in progress. For our company, the human component has always been an element of fundamental importance for the production of an excellent product. For this reason...

ATS is supported by staff with extensive experience in the best nautical culture in Viareggio.

The company is divided into highly specialized and differentiated teams to deal with various **yacht service interventions; refit and new constructions.**

## Nautical yacht refitting

Nautical refitting on yachts is the activity where ATS best reflects the passion for its work.

ATS understands that the aim of the Refit is to considerably improve the boat and thereby also satisfy our customer .

Marine Hydraulic Systems

A Refit intervention allows the client to improve his own boat, both from the aesthetic and functionaltechnological point of view.

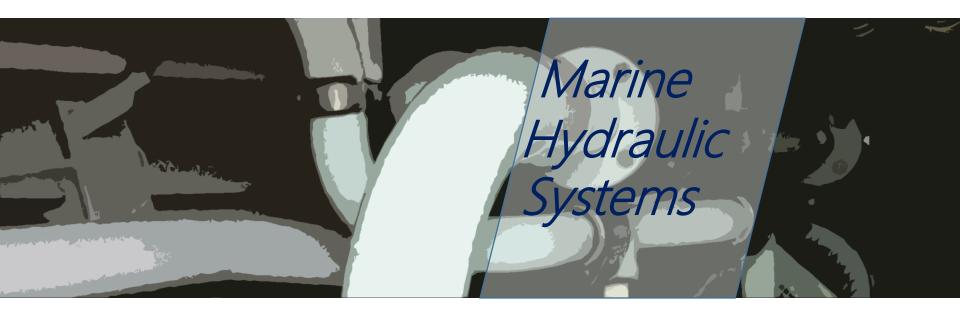

Basically a **Refit intervention** by definition, involves the "vital organs" of a yacht. In fact, in most cases the ship (especially the engine room) is **literally emptied** of all machinery and internal lines that have to be replaced. This is when it can easily be seen how important it is for a client to ensure that his investment gives **fruitful results**, without being a very high expense and poor functional contribution.

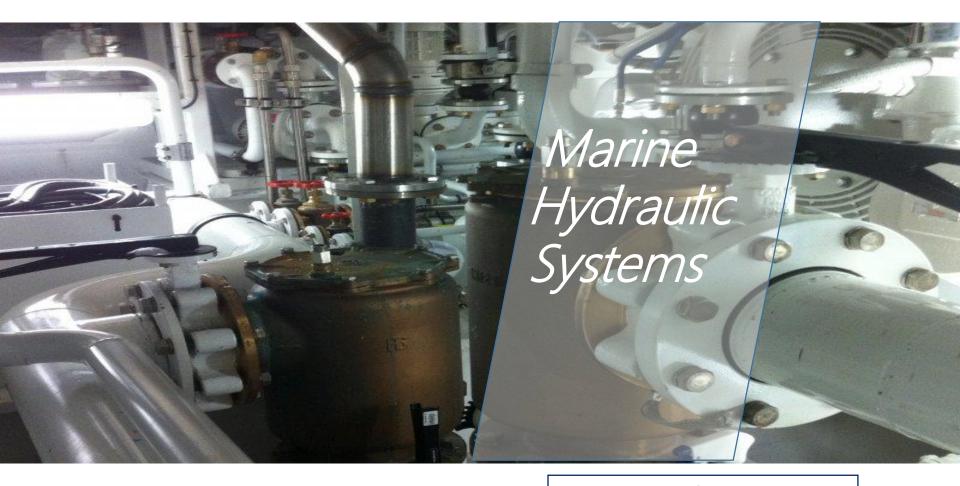

Marine Hydraulic

Systems

For this reason ATS approaches **Refit's** interventions in an extremely cautious and professional manner, never ceasing to propose initiatives and new technologies always respecting roles that are compatible with customers needs.

Marine Hydraulic Systems

ATS provides the know-how and technology necessary to offer the most appropriate solutions in its Refit interventions and carrying out new construction orders, from which innovations and new production concepts are absorbed.

These concepts proposed during the Refit of the boats (even old ones), give an added value that a modern yacht cannot do without, if it wants to be considered an exclusive object.

The importance of a Refit intervention on a yacht that is used both for private purposes and for charter services is fundamental.

For this reason ATS maintains direct contact with the client, even after the intervention.

Marine Hydarulic

#### Rutinary maintenance on yachts

ATS offers yacht and boat maintenance services, thanks to a team specialized in this type of intervention.

ATS has a large fleet of vehicles for yacht services and assistance, as well as several mobile workshops equipped for emergency intervention throughout the Mediterranean.
