Press Pack METS 2021

Seas of Solutions' mission is to offer reliable, innovative marine electronics that help improve robust data capture and maximise crew survivability, which we deliver via our globally recognised McMurdo, Netwave and Kannad Marine brands. Our latest innovations include Galileo distress beacons; the world's first Return Link Service PLB, our unique AIS EPIRBs range and the newly upgraded NW6000 VDR solutions that offer world leading vessel data visualisation.

To celebrate the 20th anniversary of the FastFind brand, Seas of Solutions are delighted to announce the FastFind CREW1 AIS MOB will join the RLS enabled FastFind Return Link in our portfolio of marine electronics.

The FastFind CREW1 offers an AIS man overboard device with a range of features to accelerate detection and support localised rescue for vessel crew. The CREW1 is the first FastFind AIS MOB, a brand synonymous with life-saving solutions for over twenty years.

The CREW1 offers a range of innovative features in a compact and easy to carry design. The semi-automatic beacon can be water or manually activated. With extended battery life and high-powered SOS strobe capability, the new CREW1 provides the quality and innovation you would expect from a FastFind beacon and is designed to improve the survivability of those working or playing on the water in 2021.

FastFind AIS MOB

AIS Man Overboard Beacon
